

THE FIRST FDA-APPROVED FLU VACCINE FOR PEOPLE 65+.¹

As we age, our bodies change and so do our immune systems.² That's why Fluzone High-Dose vaccine is specially formulated for people 65 years of age and older.¹

Here are some questions to ask your doctor or pharmacist to find out more about Fluzone High-Dose vaccine:

- *What's the difference between Fluzone High-Dose vaccine and Fluzone vaccine?*
- *Should everyone 65 years of age and older get the higher-dose flu vaccine, or are there some exceptions?*
- *Are there any precautions I should take when getting a higher-dose flu vaccine?*
- *Are there more side effects associated with a higher dose?*
- *Is this vaccine covered by Medicare?*

IMPORTANT SAFETY INFORMATION

Fluzone High-Dose vaccine should not be given to anyone with a severe allergic reaction (eg, anaphylaxis) to any vaccine component, including eggs, egg products, or to a previous dose of any influenza vaccine.

Tell your doctor if you have ever experienced Guillain-Barré syndrome (severe muscle weakness) after a previous dose of influenza vaccine. If you notice any other problems or symptoms following vaccination, please contact your health care professional immediately.

The most common side effects to Fluzone High-Dose vaccine include pain, swelling, and redness at the injection site; muscle aches, fatigue, and headache. Other side effects may occur. Vaccination with Fluzone High-Dose vaccine may not protect all individuals.

INDICATION

Fluzone High-Dose vaccine is given to people 65 years of age and older to help prevent influenza disease caused by influenza A and B strains contained in the vaccine.
